Chameleon is a smart tool that is created to offer you an intuitive, yet powerful means of getting suggestions, or ideas, and relevant links for web searches. This is a great tool that can be helpful for both beginners and advanced users. Chameleon can also be used to scan numerous sites simultaneously, helping you get to the web addresses you seek much faster. It can also convert your web address into the corresponding Uniform Resource Locator, but in addition to these things, the app lets you generate a list of the best search results based on the search terms that you specify. By combining a simple interface with useful features, Chameleon is suitable for everyday use. In case you're looking for something that can improve your ability to find relevant and useful information, this tool is not to be missed. The app itself is a simple, yet intuitive tool that helps you complete your search tasks easily and efficiently. It is a smart tool that can be used by both novice and advanced users. Simply install Chameleon on a removable device, like a USB flash drive, and start using it. There's no program installation, no leftover items, and no clutter in the system registry. With Chameleon, you can use your web browser to generate a list of search results based on the search terms you've typed into the address bar. The tool will scan the specified sites for the offered search terms and will present you with a list of relevant and useful web addresses, in addition to a clickable link that will lead you directly to the web page of your interest. Advanced features include the ability to quickly scan sites with the help of the Internet Explorer's recent search option, and allow you to scan numerous sites simultaneously, without having to specify individual sites to scan. Due to the app's small size, it may take a few moments to finish the scan, depending on your internet connection. After scanning, the list of websites is displayed in the main window, so you can preview the URLs and sort them by date, either alphabetically or in reverse date order. The tool takes the relevant web URLs and converts them into a uniform resource locator, so you can easily use them to access the web pages. Additionally, you can save the results as a separate text file, or copy and paste them into a word processor. At the end of the scan, you'll receive a log with the addresses, dates, keywords, titles
